

## Basic dependencies

### 1. (If dual-boot) Configuring grub bootloader:

- First install os-prober

```
sudo xbps-install -S os-prober
```

 Shell

- Then edit /etc/default/grub and update grub configuration:

```
echo "GRUB_DISABLE_OS_PROBER=false" | sudo tee -a /etc/default/grub  
sudo grub-mkconfig -o /boot/grub/grub.cfg
```

 Shell

### 2. NetworkManager and dbus

- First install NetworkManager in dbus then see if it is in /var/service.

```
sudo xbps-install -S NetworkManager dbus network-manager-applet
```

 Shell

- Disable other network services like wpa\_supplicant and dhcpcd using

```
sudo sv down wpa_supplicant  
sudo rm -rf /var/service/wpa_supplicant  
sudo sv down dhcpcd  
sudo rm -rf /var/service/dhcpcd
```

 Shell

- After that create a semilink for dbus and NetworkManager, and enable them.

```
sudo ln -s /etc/sv/NetworkManager /var/service  
sudo sv enable NetworkManager  
sudo ln -s /etc/sv/dbus /var/service  
sudo sv enable dbus
```

 Shell

### 3. Elogind and pipewire

- Install elogind, pipewire and pulseaudio

```
sudo xbps-install -S elogind pipewire pulseaudio pavucontrol
```

 Shell

- Configure pipewire for system-wide configuration

```
sudo mkdir -p /etc/pipewire/pipewire.conf.d  
sudo ln -s /usr/share/examples/wireplumber/10-wireplumber.conf /etc/pipewire/  
pipewire.conf.d/
```

 Shell

- Configure pulseaudio interface

```
sudo mkdir -p /etc/pipewire/pipewire.conf.d  
sudo ln -s /usr/share/examples/pipewire/20-pipewire-pulse.conf /etc/pipewire/  
pipewire.conf.d
```

 Shell

- For ALSA integration

```
sudo xbps-install -S alsa-pipewire  
sudo mkdir -p /etc/alsa/conf.d  
sudo ln -s /usr/share/alsa/alsa.conf.d/50-pipewire.conf /etc/alsa/conf.d  
sudo ln -s /usr/share/alsa/alsa.conf.d/99-pipewire-default.conf /etc/alsa/conf.d
```

 Shell

### 4. Power management:

- Install power-profiles-daemon and enable it

```
sudo xbps-install -S power-profiles-daemon
sudo ln -s /etc/sv/power-profiles-daemon/ /var/service
```

Shell

## Install neovim and cli apps

```
sudo xbps-install -S neovim ripgrep nodejs gcc wget curl fzf eza git yazi
lazygit github-cli starship zoxide mpv yt-dlp rmpc mpc mpd ffmpeg
sudo xbps-install -S cargo rust
cargo install ttpyer
```

Shell

## Configuring niri window manager

1. Install drivers and additional services

```
sudo xbps-install -S mesa mesa-vulkan-radeon mesa-dri xdg-desktop-portal
xdg-desktop-portal-gnome xdg-desktop-portal-wlr udiskie udisks2 qt6-
wayland
```

Shell

2. Install niri and some dependencies

- Niri and apps

```
sudo xbps-install -S niri evince Waybar fuzzel wofi foot wlsunset swww
wl-clipboard cliphist firefox nautilus swaylock sassc poppler gvfs unzip
playerctl obs mako ImageMagick
```

Shell

- Fonts

```
sudo xbps-install -S noto-fonts-cjk noto-fonts-cjk-sans noto-fonts-cjk-
serif noto-fonts-emoji nerd-fonts nerd-fonts-otf nerd-fonts-symbols-ttf
nerd-fonts-ttf dejavu-fonts-ttf liberation-fonts-ttf font-awesome5
```

Shell

3. To run niri write the following script:

```
#!/bin/bash
nohup pipewire > /dev/null &
dbus-run-session niri --session
```

Shell

> **[WARNING]** Not sure if to be able to run niri you need to have seatd, it worked but I had elogind enabled too

1. Customizing

- Install Tela-circle-dark

```
git clone https://github.com/vinceliuice/Tela-circle-icon-theme.git
```

Shell

- Install Orchis Grey Dark theme

```
git clone https://github.com/vinceliuice/Orchis-theme.git
cd Orchis-theme
```

Shell

- Install Bibata-Modern-Ice: First download the tar.xz file

```
sudo xbps-install -S xz
tar -xf Bibata-Modern-Ice.tar.xz
```

Shell

```
mv Bibata-Modern-Ice /usr/share/icons
```

- Install set gnome apps to use Orchis theme:

```
gsettings set org.gnome.desktop.interface icon-theme "Tela-circle-dark"
gsettings set org.gnome.desktop.interface gtk-theme "Orchis-Grey-Dark"
gsettings set org.gnome.desktop.interface color-scheme 'prefer-dark'
gsettings set org.gnome.desktop.interface cursor-theme 'Bibata-Modern-Ice'
gsettings set org.gnome.desktop.interface cursor-size 24
```

## 2. LaTeX and typst

- Install texlive and some dependencies to work with latexindent:

```
sudo xbps-install -S texlive-full biber perl-YAML-Tiny perl-File-HomeDir
```

- Install typst and additional utilities:

```
sudo xbps-install -S typst zathura zathura-pdf-poppler inkscape gimp
```

## 3. Enable printer

- Install some packages and enable cupsd service:

```
sudo xbps-install cups system-config-printer
sudo ln -s /etc/sv/cupsd /var/service
```

# Bash configuration and scripts

## 1. Bash configuration

- Install bash-completion

```
sudo xbps-install -S bash-completion
```

- Then add this to ~/.inputrc:

```
set colored-stats on
set colored-completion-prefix on
set show-all-if-ambiguous on
set show-all-if-unmodified on
set print-completions-horizontally on
set completion-ignore-case on
set visible-stats on
set mark-directories on
set mark-symlinked-directories on
```

- And this to ~/.bashrc:

```
alias ls='eza --icons'
# alias ls='ls --color=auto'
alias ll='ls -l'
alias la='ls -la'
alias nv='nvim'
alias ee='exit'
alias cc='clear'
```

```

alias '..'='cd ..'
alias ff='fastfetch'
alias dwn='cd ~/Downloads'
alias doc='cd ~/Documents'
alias bye='sudo shutdown -P now'
alias syl='sudo reboot now'
alias ns='nix-shell --run bash'

PS1='[\u@\h \W]\$ '

export PATH="$HOME/.config/fuzzel/scripts:$PATH"
export PATH="$HOME/.cargo/bin:$PATH"
export MPD_HOST=/tmp/mpd_socket
export HISTCONTROL=ignoreboth
export EDITOR="nvim"
export VISUAL="nvim"
PROMPT_COMMAND="printf '\e[6 q'${PROMPT_COMMAND:+; $PROMPT_COMMAND}"

eval "$(starship init bash)"
eval "$(zoxide init bash)"

```

## 2. Fuzzel and wofi scripts

- Made this in the directory ~/.config/fuzzel/scripts/: Clipboard history, launcher, Some tools.
- Wallpaper-selector with swww backend using wofi
